href-ul: \texttt{\LaTeX} Package
That Makes Underscored Links*

Yegor Bugayenko
yegor256@gmail.com
31.10.2022, 0.3.0

1 Introduction

This package helps you make your hyperlinks underlined, using \texttt{\href} command:

\begin{document}
Go to \underline{Google}!
\end{document}

Changing the color of the text also changes the color of the line:

\begin{document}
Go to \textcolor{red}{Google}!
\end{document}

Changing the size of the text doesn’t change the height of the line:

\begin{document}
You can always find anything in \texttt{Google}, but it’s better to learn something from a school too!
\end{document}

*The sources are in GitHub at \url{yegor256(href-ul)}
2 Implementation

First, we include two packages:
\PassOptionsToPackage{normalem}{ulem}
\RequirePackage{ulem}
\PassOptionsToPackage{hidelinks}{hyperref}
\RequirePackage{hyperref}

Then, we define the \href command:
\makeatletter\begingroup%
\catcode'\$=6 %
\catcode'#=12 %
gdef\href@split$1#$2#$3\$4{%
\hyper@@link{$1}{$2}{\uline{$4}}%
\endgroup%
\endgroup\makeatother
Change History

v0.2.0
General: Initial version .......................... 2

v0.3.0
General: We started using "docshots" package for better rendering of examples. .......................... 2
## Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
