Abstract

Creation of title pages is something most authors should not have to do. But reality is not perfect, so a lot of authors have to do it. In 2009 KOMA started the title page project at https://komascript.de/titlepage to collect real title pages and implement them with a well defined interface. In 2021 the project has been moved to https://github.com/komascript/uni-titlepage and renamed.

Now, changing from one title page style to another would be very simple. Nevertheless implementation of a new title page style may be still difficult. But maybe the guys of the title page project would help you. Just ask!

  4.4 The Examples and the Manual ................................ 57
1 Loading the Package

You may load this package like all the other package, simply using:

\usepackage{uni-titlepage}

This package declares several options for title page manipulation. We will
describe all those options in the following. Most of the options are package options
as well, but some are style options only. You may use every package option already
as optional argument of \usepackage and even of \documentclass. But in most
cases it would be better to use them as optional argument of \TitlePageStyle
or \maketitle. We show this way below.

2 The Title Page Styles and their Options

\TitlePageStyle Several title page styles are supported. You may select a title page style using:

\TitlePageStyle\[⟨option⟩={value},...\]{⟨style⟩}.

The available styles are shown at the following sub-sections. Options may be every
package option and every style option.

\maketitle After loading a style you may generate title pages using:

\maketitle\[⟨option⟩={value},...\].

Again, you may use every package option and every style option as optional argu-
ment.

\TitleOption Another way to set an option is to use either

\TitleOption\{(option)={value}\}

or

\TitleOptions\{(option)={value},...\}.

You can set every package option an every option of already loaded title page
styles.

For every main option, that expects a string argument exists a correspond-
ing command with the same name. So you may set, e.g., the title either using
\TitleOption{title={This is the Title}} or \maketitle{title={This is the Title}} or \TitlePageStyle
\[title={This is the Title}\]{...} or \title{This is the Title}. The
most robust way is to use the command \title instead of the option at one
of the other commands. If you use the option you may need to add \protect
in front of some commands inside the option value. But note: This is not valid
for alias options like student, because alias options do not have a corresponding
command!

</tbody>
</table>

**Note:** Depending on the used style some elements are mandatory. You will get an error message like

```
Package uni-titlepage Error: empty title element ‘author’.
```

if such a mandatory element has not been set. In this case use either the option or the corresponding command to setup at least a dummy value, e.g.

\author{DON’T FORGET TO CHANGE THE AUTHOR}

before the corresponding `\maketitle`.

Let’s have a look at the already defined title page styles. You should find an example LaTeX file for each of them at the documentation folder. If not, ask you distributor or administrator for those! But you may find the code of all examples in `docstrip` syntax even at subsection 4.4 starting at page 57. At the shown examples most variable contents have been made red.
2.1 Style DHBW

Josef Schmidbauer asked me for a title page usable for bachelor thesis at the “Duale Hochschulen Baden-Württemberg”. This is a only one title page style.

The page (in example titlepage-DHBW.tex) is:

1. main title page with titlehead, mainlogo, title, subject, academicgrade, discipline, place, author, duration, matriculationnumber, course, company, referee, university, and date.

Note: The upper right corner is the logo placeholder. If you’d download the logo from the DHBW homepage http://www.dhbw.de and save it with the name DHBW_d_MOS_195x95_rgb_300.jpg it would be used automatically. The logo file is also available from https://de.wikipedia.org/wiki/Datei:DHBW_d_MOS_195x95_rgb_300.jpg. This original logo has a large white border, so it would be much smaller than the red box at the example. The example file also contains comments for an optional company logo at the upper left corner.
2.2 Style KOMA-Script

This is a style similar to the title pages of KOMA-Script classes.

The pages (in twoside example titlepage-KOMAScript.tex) are:

1. defined by `extratitle`, which is not a package option but a style option. You may set it using \TitleOption or \TitleOptions after loading the style or with the optional argument of \maketitle or \TitlePageStyle.
2. empty and only in twoside mode with extratitle used.
3. main title page with `titlehead`, `subject`, `title`, `subtitle`, `author`, `date`, `publisher`. You may use \thanks at any of these.
4. only in twoside mode defined by \texttt{uppertitleback} and \texttt{lovertitleback}, which are not package options but style options. You may set them using \texttt{\TitleOption} or \texttt{\TitleOptions} after loading the style or with the optional argument of \texttt{\maketitle} or \texttt{\TitlePageStyle}.

5. optional post title with \texttt{dedication}.

6. empty and only in twoside mode with \texttt{dedication} used.
2.3 Style Markus-1

This is a style similar to the one of the title of the KOMA-Script book.

The pages (in twoside example \texttt{titlepage-Markus-1.tex}) are:
1. defined by \texttt{publisher}; may be omitted by \texttt{publisher=0}.
2. only in twoside mode with \texttt{publisher} defined by \texttt{author}.
3. main title page with \texttt{subject}, \texttt{title}, \texttt{subtitle}, and \texttt{date}. 
4. only in twoside mode defined by `uppertitleback` and `lovertitleback`, which are not package options but style options. You may set them using \TitleOption or \TitleOptions after loading the style or with the optional argument of `maketitle` or `\TitlePageStyle`.

5. optional post title with `dedication`.

6. empty and only in twoside mode with `dedication` used.
2.4 Style Markus-2

This style is not a real live style, but similar styles are often used:

The pages (in twoside example titlepage-Markus-2.tex) are:

1. defined by extratitle.
2. empty and only in twoside mode with extratitle used.
3. main title page with titlehead placed at the page head (if this is too high, it might be put outside the page; if it is too deep, it might overwrite part of the title), rulewidth, rulesep and rulecolor for the vertical rule (these aren’t package options but style options), subject, title, subtitle, author, date, and publisher. Note: If you want to use option rulecolor you have to load a package, that defines \color, e.g., color or xcolor. Otherwise the color will be ignored.
4. only in twoside mode defined by `uppertitleback` and `lowertitleback`, which are not package options but style options. You may set them using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.

5. optional post title with `dedication`.

6. empty and only in twoside mode with `dedication` used.
2.5 Style Spacer

This style is a variant of style Markus-2 from subsection 2.4. It was asked by spacer2012 at the original titlepage project on https://komascript.de/titlepage. In difference to Markus-2 the title head will not be placed at the page head but at the body.

The pages (in twoside example titlepage-Spacer.tex) are:

1. defined by extratitle.
2. empty and only in twoside mode with extratitle used.
3. main title page with titlehead placed at the page head, rulewidth, rulesep and rulecolor for the vertical rule (these aren’t package options but style options), subject, title, subtitle, author, date, and publisher. Note: If you want to use option rulecolor you have to load a package, that defines \color, e.g., color or xcolor. Otherwise the color will be ignored.
4. only in twoside mode defined by `uppertitleback` and `lowertitleback`, which are not package options but style options. You may set them using `\TitleOption` or `\TitleOptions` after loading the style or with the optional argument of `\maketitle` or `\TitlePageStyle`.

5. optional post title with `dedication`.

6. empty and only in twoside mode with `dedication` used.
2.6 Style TU-DD

This style is used at the “Technische Universität Dresden”. I was asked for this several years ago. Only one title page is defined!

The page (in example `titlepage-TU-DD.tex`) is:

1. main title page with university, faculty, chair, professor, title, subject, author, discipline, matriculationnumber, advisor, place, and date.

But there is another variant. If option `blackborder` was set to true, an black border is put around the page:

The page (in example `titlepage-TU-DD.tex` with option `blackborder`) is:

1. main title page with university, faculty, chair, professor, title, subject, author, discipline, matriculationnumber, advisor, place, and date.
2.7 Style TU-HH

This style is used at the “Technische Universität Hamburg-Harburg”. I was asked for this several years ago. Only two title pages are defined!

The pages (in twoside example \texttt{titlepage-TU-HH.tex}) are:

1. main title page with \texttt{title}, \texttt{subtitle}, \texttt{university}, \texttt{academicgrade}, \texttt{subject}, \texttt{author}, \texttt{place}, and \texttt{date}. Some additional text depending on the selected language will be used also.

2. only in twoside mode with \texttt{referee} and \texttt{oralexaminationdate}.

The output of style TU-HH differs, if you use option \texttt{final}, which is a style option, not a package option. You may set it using \texttt{\TitleOption} or \texttt{\TitleOptions} after loading the style or with the optional argument of \texttt{\maketitle} or \texttt{\TitlePageStyle}.
2.8 Style KIT

This style is used at the “KIT – University of the State of Baden-Württemberg and National Research Center of the Helmholtz Association”. I’ve made this because of the ugly \LaTeX class and template made by the KIT itself. Only one title page is defined!

The page (in example titlepage-KIT.tex) is:

1. main title page with titlehead, mainlogo, title, subject, author, referee, advisor, university, duration, and homepage. Some additional text depending on the selected language will be used also.

If titlehead is empty or unused left aligned mainlogo will be used. If mainlogo is empty or unused, and if you have a logo file KITLogo_RGB.pdf, this will be used. As an alternative also 2860px-Logo_KIT.svg.png, 2000px-Logo_KIT.svg.png, 1280px-Logo_KIT.svg.png, 1024px-Logo_KIT.svg.png, 1000px-Logo_KIT.svg.png, 800px-Logo_KIT.svg.png, 640px-Logo_KIT.svg.png, or 500px-Logo_KIT.svg.png from https://de.wikipedia.org/wiki/Datei:Logo_KIT.svg would be auto-detected. Several other elements will be set to defaults too, if they are empty. So you don’t need to set all the elements, that has been set at the example file.

2.9 Style JT-Aufsätze

The style is based on the front cover of “Jan Tschichold: Ausgewählte Aufsätze über Fragen der Gestalt des Buches und der Typographie, Birkhäuser Verlag Basel, 1975, ISBN: 3-7643-1946-1”. I’ve made this, because the book is a major book of classic typography. It seems to be old fashioned and indeed it is. Note, that the front cover of a book an the main title of a book are not the same! Nevertheless, here I’ve made a main title from a front cover. Currently only one title page is defined, but you may also use extratitle, uppertitleback, and lowertitleback.

The page (in example titlepage-JT-Aufsätze.tex) is:

1. main title page with author, title, publisher, rulewidth, rulesep for width of the horizontal rules and the distance between them and rulecolor for the color of the rules (these aren’t package options but style options). Note: If you want to use option rulecolor you have to load a package, that defines \color, e.g., color or xcolor. Otherwise the color will be ignored.
2.10 Style JT-Geschichte

The style is based on “Jan Tschichold: Geschichte der Schrift in Bildern; Holbein-Verlag, 1947”. This is another major book of classic typography. It seems to be old fashioned and indeed it is. Currently only one title page is defined, but you may also use extratitle, uppertitleback, and lowertitleback.

The page (in example titlepage-JT-Geschichte.tex) is:

1. main title page with author, title, publisher, place, rulewidth and rulesep for width of the horizontal rules and the distance between them and rulecolor for the color of them (these aren’t package options but style options). Note: If you want to use option rulecolor you have to load a package, that defines \color, e.g., color or xcolor. Otherwise the color will be ignored.

Note, that the default for titlepagefont prints everything but the title with ad-hoc letterspacing in upper-case letters if \lsstyle is available and without letterspacing but in small capitals otherwise. Changing the default of titlepagefont will also change this automatism.
2.11 Style JT-Typography

The style is based on “Jan Tschichold: The New Typography; University of California Press, Berkley and Los Angeles, California 1995”. This is the English translation of another major book of classic typography. Some things like missing letterspacing at the upper-case title seems to be wrong. Currently only one title page is defined, but you may also use extratitle, uppertitleback, and lowertitleback.

The page (in example titlepage-JT-Geschichte.tex) is:

1. main title page with author, title, subtitle, place, date, publisher.
2.12 Style WWUM

Tobias Südkamp asked me for that title for the Westfälischen Wilhelms-Universität Münster. The professor is more likely the chairman. Female referees should be prefixed by \[f\]. You can omit the examination date defining an empty \examinationdatename.

The pages (in example tilepage-\texttt{WWUM}.\texttt{tex}) are:

1. cover page with author, title, \texttt{\makebox[\textwidth]{\texttt{\the\year}}}
2. the backside of the cover page is empty if it exists
3. main title page with chair, title, subject, academic grade, science, discipline, faculty
4. main title back side with professor, referee, oral examination date (normally empty)
2.13 Style UKoLa

In 2007 several students asked me for the title of the Universität Koblenz-Landau. At that time, I've made a package for the title they asked for. The package has been published at https://komascript.de/unikoblenzlandau only. In 2021, after I've published uni-titlepage, it was time to implement this title also as a title style definition. Note, this is not an official style of the University Koblenz-Landau. Several referees can be separated by \and. Female referees should be prefixed by [f].

The page (in example titlepage-UKoLa.tex) is:

1. main title page with mainlogo, secondlogo, title, subject, academicgrade, chair, dicipline, place, author, referee, and date.

Note: The upper left corner is the logo placeholder. If you'd download the logo from http://www.uni-koblenz-landau.de/logo.png and save it with the name uni-koblenz-landau.png, it would be used automatically.
3 Additonal Commands

\texttt{\textbf{\textbackslash{NowButAfterBeginDocument}}} Command

\texttt{\textbackslash{NowButAfterBeginDocument}\{(code)\}}

is something like \texttt{\textbackslash{AtBeginDocument}}, but if you call it somewhere after \texttt{\begin\{document\}}
argument \texttt{(code)} will be used immediately. This command is used inside some of the title page styles, because you may load them either at the preamle or even after \texttt{\begin\{document\}}, but some code should not be executed before \texttt{\begin\{document\}}.

\texttt{\textbackslash{titlepage}} (env.) In oposite to the titlepage environment of the standard classes,

\texttt{\begin\{titlepage\}\{(options)\}}

...  
\texttt{\end\{titlepage\}}

knows some options. These are \texttt{pagestyle\{style\}} and \texttt{pagenumber\{number\}}. The first one changes the page style of the generated title page to the given \texttt{\{style\}}. If the option is not set, the default \texttt{empty} will be used. The second one sets the logical page number of the generated title page to the given \texttt{\{number\}} and sets the counter \texttt{pagenumber} to this value. If the option is not used, the value of counter \texttt{pagenumber} will be increased by one and the result is used for the logical page number.

\texttt{\textbackslash{fullsizetitle}} (env.) Using

\texttt{\begin\{fullsizetitle\}\{(options)\}}

...  
\texttt{\end\{fullsizetitle\}}

is almost the same like above. But \texttt{fullsizetitle} removes the margins from the generated title page. Nevertheless if binding correction (aka binding offset) of package \texttt{typearea} or \texttt{geometry} could be recognized, it will not be removed. Some of the title page styles use this environment instead of titlepage inside \texttt{\maketitle}. With this the margins of the title page do not depend on the type area of the document.

\texttt{\textbackslash{usetitleelement}} Command

\texttt{\textbackslash{usetitleelement}\{element\}}

gives the content of the corresponding title \texttt{\{element\}}. Each main \texttt{\{element\}} defined by the package may be used. Those are currently: \texttt{advisor}, \texttt{author}, \texttt{chair}, \texttt{company}, \texttt{course}, \texttt{date}, \texttt{dedication}, \texttt{academicgrade}, \texttt{discipline}, \texttt{duration}, \texttt{faculty}, \texttt{homepage}, \texttt{mainlogo}, \texttt{matriculationnumber}, \texttt{oralexaminationdate}, \texttt{place}, \texttt{professor}, \texttt{publisher}, \texttt{referee}, \texttt{subject}, \texttt{subtitle}, \texttt{title}, \texttt{titlehead}, and \texttt{university}. Note: \texttt{student} isn’t a main \texttt{\{element\}}, because it’s only an alias for \texttt{author}.

\texttt{\textbackslash{usenonemptytitleelement}} added in v1.0

\texttt{\textbackslash{usenonemptytitleelement}\{element\}}

is a variant of \texttt{\textbackslash{usetitleelement}} that not only reports an error for a not existing \texttt{\{element\}} but also for an empty \texttt{\{element\}}. It should be used to print mandatory elements.
4 Implementation

Note: To generate all files, developers and beta testers should simply use the source from https://github.com/komascript/uni-titlepage and call

l3build unpack
l3build doc

The resulting documentation will be placed in the main folder. The unpacked style file are in build/unpacked. You can use

l3build install

to install them in TEXMFHOME. See the manual of l3build for more information.

As an alternative you can use the source distribution from CTAN and run:

tex uni-titlepage.dtx

The documentation is usually part of the source distribution at CTAN. Note, that all the generated tex files are example files. Do not copy them to the run-time files but the documentation folder!

4.1 The Installation Driver ‘uni-titlepage.ins’

First of all we produce uni-titlepage.ins, the installation driver. It starts very common with loading docstrip, preamble declaration and start of generation.

\def\batchfile{uni-titlepage.dtx}
\input docstrip.tex
\ifToplevel{%
\Msg{********************************************************************}
\Msg{*}
\Msg{* Steps of uni-titlepage generation:}
\Msg{* ==============================}
\Msg{*}
\Msg{* - Generation of all needed files:}
\keepsilent
\askforoverwritefalse
}

\providecommand*{\@dedication}{}
\providecommand{\dedication}[1]{\gdef\@dedication{#1}}
\DefineFamilyKey{title}{dedication}{\dedication{#1}\FamilyKeyStateProcessed}
\usetitleelement
\@usetitleelement@error

Users cannot simply use, e.g., \@title, \@mainlogo etc. So we need a command to get them:
\newcommand*{\usetitleelement}[1]{%
  \scr@ifundefinedorrelax{#1}{%
    \@usetitleelement@error{#1}%
  }{%
    \scr@ifundefinedorrelax{@#1}{%
      \@usetitleelement@error{#1}%
    }{%
      \@nameuse{@#1}%
    }%
  }%
}%
\newcommand*{\@usetitleelement@error}[1]{%
  \PackageError{uni-titlepage}{'#1' isn't a title element}{You should use \string\usetitleelement\space for title elements only!\MessageBreak
  If you'll continue, command will be ignored.}%
}%
\usenonemptytitleelement

Sometimes we want to use a title element that must not be empty.
\newcommand*{\usenonemptytitleelement}[1]{%
  \expandafter\ifx\csname @#1\endcsname\@empty
    \PackageError{uni-titlepage}{empty title element '#1'}{Title element '#1' is empty but mandatory for the used title page style.\MessageBreak
      So it must not be empty.\MessageBreak
      Please see the manual for more information about assigning values to main title elements via options or commands.\MessageBreak
      If you'll continue, a \string\strut\space will be used.}%
  \else
    \usetitleelement{#1}%
  \fi
}%

Some variables use their own configurable font:
\titlepagefont (opt.)
\@titlepagefont
\scr@ifundefinedorrelax{newkomafont}{%
  \newcommand*{\@titlepagefont}{}
}{%
  \newkomafont{titlepage}{%}
}%
\DefineFamilyKey{title}{titlepagefont}{\titlepagefont{#1}{}%}
\renewcommand*{\@titlepagefont}{%

4.3 The titlepage Drivers
\begingroup
\def\PackageNotLoadedError#1{%  \GenericError{% (\@one )\@spaces\@spaces\@spaces\@spaces  File ‘#1’ Error: package ‘uni-titlepage’ hasn’t been loaded%}}
This definition file was made to be loaded by package ‘uni-titlepage’. You may not use it without package ‘uni-titlepage’!

See the documentation of package ‘uni-titlepage’ for explanation.

Each style corresponds with an own member. Nevertheless most styles will not have options in their own, because string options should be global to make change of style very easy.

Nevertheless some styles have their own switches:

blackborder (opt.) Truerrand at style TU-DD:

\FamilyBoolKey[TU-DD]{title}{blackborder}{blackborder}

final (opt.) Style TU-HH distinguishes between drafts and final thesis.

\FamilyBoolKey[TU-HH]{title}{final}{final}

Some styles have some variable rules at the title:

rulewidth (opt.)
\FamilyBoolKey[title]{@rulewidth}{rulewidth}{rulewidth}

rulesep (opt.)
\FamilyBoolKey[title]{@rulesep}{rulesep}{rulesep}

rulecolor (opt.)
\FamilyBoolKey[title]{@rulecolor}{rulecolor}{rulecolor}
An some has their own terms:

\providecommand*{\presentationinformationUKoLa}{% to optain the degree\% of \usenonemptytitleelement{discipline}\%} %
\providecommand*{\presentationinformationWWUM}{% to optain the degree\% of \usenonemptytitleelement{discipline}\%} %
\providecommand*{\presentationinformationTUHH}{% to optain the degree\% of \usenonemptytitleelement{discipline}\%} %

# ABSTRACT

Creation of title pages is something most authors should not have to do.
But reality is not perfect, so a lot of authors have to do it. In 2009
KOMA started the title page project at http://komascript.de/titlepage
to collect real title pages and implement them with a well defined interface.
In 2021 the project has been moved to github.com/komascript/uni-titlepage.
and renamed.

Now, changing from one title page style to another would be very simple. Nevertheless implementation of a new title page style may be still difficult. But maybe the guys of the title page project would help you. Just ask!

# Unpacking and Installation for Developers and Distributors

To unpack and install all files, you can download the source from github and then run:

```
l3build install
```

Afterwards you can build the manual and the PDFs of the examples using:

```
l3build doc
```

As an alternative you can use the CTAN source distribution. This already contains the user manual and the PDFs of the example files. So you only have to run

```
tex uni-titlepage.dtx
```

to generate the package file `uni-titlepage.sty`, the title definition files `title-*.def` and the example titlepages `titlepage-*.tex`.

Please note, the `title-*.def` files are run-time files. Together with `uni-titlepage.sty` they have to be placed in `tex/latex/uni-titlepage` inside a TDS tree. All files `titlepage-*.tex` and `titlepage-*.pdf` as well as `uni-titlepage.pdf` are part of the documentation and should be placed in `doc/latex/uni-titlepage/` of the TDS tree.

# Unpacking and Installation for Users

Users can use the installation described at [Unpacking and Installation for Developers and Distributors](#unpacking-and-installation-for-developers-and-distributors). However, if your TeX distributor already distributes a ready for installation package, you do not need and should not create files and copy them yourself. Just use the package manager of your TeX distribution to install the package.

# How to Contribute

If you have made a title definition that is not specific for a single project but could be of interest for other users, you can either

* make your own `uni-titlepage-FOO` package with its own manual and [upload it to ctan](https://www.ctan.org/upload),
* contribute in adding it to `uni-titlepage`.

The first option has the advantage, that you are free. There won't be any code
reviews by the ‘uni-titlepage’ developers. You don’t need to use the same
coding style. There is not need to accept the license of ‘uni-titlepage’
etc. But in this case you have to take care to keep it compatible with future
releases of ‘uni-titlepage’ and it will not be presented in the
‘uni-titlepage’ manual.

The second option has the advantage, that after accepting your code, the
‘uni-titlepage’ developers will try to keep it working even if they change
‘uni-titlepage’. But there are several restrictions to your code, before it
will be accepted. For example, you should always try to use general options,
if possible. *Static text* (not handled by options) should be configurable via
‘\newcaptionname’, ‘\providecaptionname’ and ‘\renewcaptionname’ and should be
available at least in English and German (but if we can, we help in
translating them). The coding style and quality is also a criterion.

The second option has the advantage, that after accepting your code, the
‘uni-titlepage’ developers will try to keep it working even if they change
‘uni-titlepage’. But there are several restrictions to your code, before it
will be accepted. For example, you should always try to use general options,
if possible. *Static text* (not handled by options) should be configurable via
‘\newcaptionname’, ‘\providecaptionname’ and ‘\renewcaptionname’ and should be
available at least in English and German (but if we can, we help in
translating them). The coding style and quality is also a criterion.

Index

Numbers written in italic refer to the page where the corresponding entry is de-
scribed; numbers underlined refer to the code line of the definition; numbers in
roman refer to the code lines where the entry is used.
