

```
% TDSfr of the french style files distribution
%                                     Copyright Bernard Gaulle as in french_doc.txt
%
```

Where to put the files from the french distribution?  
=====

Assuming you download the distrib under \$texmf/source  
(probably and preferably ../texmf-local/source)  
you have to move many files to various places.  
Here are the guidelines if there is no way for you to use  
the automatic GNUmakefile installation procedure:

If your engine is MlTeX capable, use the mltex tree and place  
links in the tex tree.

The hyphenation files:  
=====

initex/frhyph.tex should go to \$texmf/tex/generic/hyphen  
along with dummyhyph.tex and zerohyph.tex

The documentation files:  
=====

Alire.\* (to be renamed something like DocFrenchAlire.\*)  
and doc/\* should go to \$texmf/doc/french/base

The configuration files:  
=====

.ini, .cfg, .dat should go to \$texmf/(ml)tex/french/config  
along with hyconfig.tex, hysmltex3.tex and eclain.tex

The frenchle input files:  
=====

.sty and .ldf should go to \$texmf/tex/latex/frenchle

The keyboard input files:  
=====

.sty, .tex and .kbc should go to \$texmf/tex/latex/keyboard

The msg input files:  
=====

.sty and .tex should go to \$texmf/tex/latex/msg

The mlp input files:  
=====

.sty and .mlp should go to \$texmf/tex/latex/mlp

The run-time input files:  
=====

.ist files (if any) should go to \$texmf/mkindex/french  
.bst files (if any) should go to \$texmf/bibtex/french  
all other files of inputs/\* except .doc, .org and README\*  
should go to \$texmf/(ml)tex/french/base  
language.dat should go there.

The contrib files:  
=====

.ist files (if any) should go to \$texmf/mkindex/french or french/contrib  
.bst files (if any) should go to \$texmf/bibtex/french or french/contrib

all other files should go to \$texmf/(ml)tex/french/contrib

The executable modules you will generate can go in any place where  
===== they can be called simply by there name.

Defaultly, if you have the rights to do it, move them at the  
same place where TeX resides.

All other unmoved files:

=====

should stay in the tree \$texmf/source/french

--bg modified 2006/01/20
